An Introduction to. Nanotechnology.

Nanotechnology is defined as the study and use of structures between 1 nanometer and 100 nanometers in size. To give you an idea of how small that is, it would take eight hundred 100 nanometer particles side by side to match the width of a human hair. While this is the most common definition of nanotechnology researchers with various focuses have slightly different definitions.

Nanotechnology represents a revolutionary path for technological development that concerns the management of material at the nanometer scale (one billion times smaller than a meter).

Nanotechnology factually means any technology on the nanoscale that has numerous applications in the real world.

Abstract Nanotechnology refers to technology that is implemented at the nanoscale and has applications in the real world. Unique physical and chemical properties of nanomaterials can be exploited for applications that benefit society. Nanotechnology represents a megatrend and has become a general purpose technology.

Introduction to Nanotechnology | SpringerLink

Nanotechnology comprises any technological developments on the nanometer scale, usually 0.1 to 100 nm. (One nanometer equals one thousandth of a micrometer or one millionth of a millimeter.) The term has sometimes been applied to any microscopic technology.

Encompassing nanoscale science, engineering, and technology, nanotechnology involves imaging, measuring, modeling, and manipulating matter at this length scale. A nanometer is one-billionth of a meter. A sheet of paper is about 100,000 nanometers thick; a single gold atom is about a third of a nanometer in diameter.
