Melodic Intonation Therapy (MIT) is an evidence-based treatment method that uses intoning (singing) to improve expressive language in people with aphasia. The approach takes advantage of the undamaged right hemisphere by engaging areas that are capable of language.

Melodic Intonation Therapy (MIT) for Aphasia & Apraxia: A ...

Melodic Intonation Therapy (MIT) takes advantage of this singing ability. It applies musical elements to speech in order to improve language production. MIT uses the melody and rhythm of speech in an exaggerated way, making speech resemble singing. The speech-language pathologist (SLP) will start with simple phrases.

Melodic Intonation Therapy | Lingraphica

Melodic intonation therapy may help people with severe aphasia learn how to speak again. Surprisingly, even if you can't talk after stroke, this type of singing therapy may help you recover your language skills. To understand how it works, you need to know a little brain anatomy. Let's dive straight in. Is Language Really Just a Left-Brained Act?

Melodic Intonation Therapy for Aphasia: Recover Speech By ...

Melodic Intonation Therapy (MIT) is the use of melodic and rhythmic techniques to assist in speech language therapy. A patient is taught to hum or sing words, thoughts, and phrases they have a difficult time remembering or articulating.

What is Melodic Intonation Therapy and How Does It Work ...

Last Modified Date: December 01, 2020. Melodic intonation therapy, or MIT, is a type of speech therapy for communication disorders like aphasia, using a certain kind of singing to help with verbal expression through normal speech. This therapeutic activity encourages the brain's right hemisphere to compensate for impaired speech abilities normally based in the left hemisphere.

What Is Melodic Intonation Therapy? (with pictures)

Melodic Intonation Therapy (MIT) is an evidence-based speech therapy treatment for aphasia. But do you, as a Speech-Language Pathologist, actually know how to implement the protocol correctly? Download this how-to guide and start using MIT today!

Melodic Intonation Therapy - A How To Guide — Neuro Speech ...

Melodic Intonation Therapy. Many stroke survivors and people with aphasia are left with little or no speech. However, they are often able to sing, sometimes with the same fluency and clarity they had before the onset of illness. In 1973, researchers developed a therapy based on the fact that speech and singing are stored in different parts of the brain.

Melodic Intonation Therapy – Research & Hope

Melodic intonation therapy, or MIT, is a type of speech therapy for communication disorders like aphasia, using a certain kind of singing to help with verbal expression through normal speech. Increase the ability of patients with poor verbal skills to produce representational gestures for purposes of functional communication.

melodic intonation therapy - srinfrspace.com

Music, Stroke Recovery, and Neuroimaging Laboratory, Beth Israel Deaconess Medical Center/Harvard Medical School, Boston, Massachusetts, USA. For more than 100 years, clinicians have noted that patients with nonfluent aphasia are capable of singing words that they cannot speak. Thus, the use of melody and rhythm has long been recommended for improving aphasic patients' fluency, but it was not until 1973 that a music-based treatment [Melodic Intonation Therapy (MIT)] was developed.
